

Application No.: 09/967,031

Amendment After Allowance dated: August 17, 2005

**AMENDMENT TO THE CLAIMS**

1. (Currently Amended) An apparatus ~~for cache flushing~~, comprising:
  - a list structure to track a status of a plurality of cache entries containing one bit per a variable number of cache lines, wherein said list structure is located outside a cache, wherein said list structure does not contain cache data or addresses, and wherein a logical arrangement of said list structure conforms to said variable number;
  - a query mechanism to check said list structure for the state of a cache entry; and
  - a cache flush mechanism, logically coupled to said list structure and the cache, to flush a cache entry and for modifying said list structure to reflect a flushed state.
2. (Original) An apparatus in accordance with claim 1, wherein:
  - said list structure comprises one bit per cache line.
- 3-5 (Cancelled)
6. (Previously Presented) An apparatus in accordance with claim 1, wherein:
  - said variable number is set by an operating system.
7. (Previously Presented) An apparatus in accordance with claim 1, wherein:
  - a logical arrangement of said list structure matches an architecture of a cache.

Application No.: 09/967,031

Amendment After Allowance dated: August 17, 2005

8. (Previously Presented) An apparatus in accordance with claim 1, wherein:  
said cache flush mechanism modifies a cache state responsive to results of a query of the  
said list structure.
9. (Original) An apparatus in accordance with claim 8, wherein:  
said cache flush mechanism is logically coupled to a higher level cache for writing back  
modified data.
10. (Original) An apparatus in accordance with claim 8, wherein:  
said cache flush mechanism based on the said list structure is logically coupled to a  
higher level cache for evicting modified data.
11. (Previously Presented) An apparatus in accordance with claim 8, wherein:  
said cache flush mechanism is logically coupled to a main memory for writing back  
modified data.
12. (Previously Presented) An apparatus in accordance with claim 8, wherein:  
said cache flush mechanism is logically coupled to a main memory for evicting modified  
data.
13. (Original) An apparatus in accordance with claim 1, wherein:  
said list structure is located in random access memory (RAM).

Application No.: 09/967,031

Amendment After Allowance dated: August 17, 2005

14. (Previously Presented) An apparatus in accordance with claim 1, wherein:  
said list structure is located on a die.
15. (Previously Presented) An apparatus in accordance with claim 1, further comprising:  
a snoop command interpreter to check said list structure in response to a snoop command.
16. (Currently Amended) ~~In a computer system with a cache memory, an apparatus for flushing the cache.~~ An apparatus comprising:  
a list structure to record modifications to a plurality of cache entries and containing one bit per a variable number of cache lines, wherein said list structure is located outside a cache and said list structures does not contain cache data or addresses and wherein a logical arrangement of said list structure conforms to said variable number;  
a cache controller to query said list structure for modifications to said plurality of cache entries and generate a list of cache write-back instructions; and  
wherein said cache controller is to invalidate said plurality of cache entries corresponding to said list of cache write-back instructions.
17. (Original) An apparatus in accordance with claim 16, wherein:  
said list structure is a full list.
18. (Original) An apparatus in accordance with claim 16, wherein:  
said list structure is a partial list.

Application No.: 09/967,031

Amendment After Allowance dated: August 17, 2005

19. (Previously Presented) An apparatus in accordance with claim 17, wherein:  
said full list comprises one entry per cache line.
20. (Original) An apparatus in accordance with claim 18, wherein:  
said partial list comprises one entry per plurality of cache lines.
21. (Currently Amended) ~~In a multiprocessor computer system with a plurality of processors and cache memory, an apparatus for cache flushing;~~ An apparatus comprising:  
a list structure to track a status of a plurality of cache entries, wherein said list structure is located outside a cache and wherein said list structure does not contain cache data or addresses;  
a processor identification within said list structure to link each of said plurality of cache entries to one of the ~~plurality~~ a plurality of processors;  
a query mechanism to check said list structure for a state of a cache entry identified with a processor;  
a cache flush mechanism to flush a cache entry linked to an identified processor and to modify said list structure to reflect a flushed status.
22. (Original) An apparatus in accordance with claim 21, wherein:  
said list structure contains at least one bit for each cache line.
23. (Original) An apparatus in accordance with claim 21, wherein:  
said list structure contains at least one bit for each of a plurality of cache lines.

Application No.: 09/967,031

Amendment After Allowance dated: August 17, 2005

24. (Original) An apparatus in accordance with claim 21, wherein:  
said list structure is located on a die with at least one of the plurality of processors.
25. (Currently Amended) A method of ~~flushing a cache~~, comprising:  
creating a table of cache entries separate from ~~the cache~~ a cache and without the cache data or addresses containing one bit per a variable number of cache lines and wherein a logical arrangement of said table conforms to said variable number;  
tracking modified cache entries in said table; and  
generating a write-back command from said table in response to a cache flush event.
26. (Original) A method in accordance with claim 25, further comprising:  
generating an invalidate command in response to a cache flush event.
27. (Previously Presented) A method in accordance with claim 25, further comprising:  
repeating the method for each level of cache.
28. (Original) A method in accordance with claim 25, further comprising:  
querying said table in response to a snoop command.
29. (Original) A method in accordance with claim 25, further comprising  
writing-back modified cache entries to memory.

Application No.: 09/967,031

Amendment After Allowance dated: August 17, 2005

30. (Original) A method in accordance with claim 25, further comprising:  
writing-back modified cache entries to a high level cache.
